EXPERIENCE

Engineering Manager

Mar 2022 – Present

SpotOn

- Successfully led 4 full-stack software engineering teams, consisting of 28 individual contributors, to deliver on product roadmaps with a focus on iterative/incremental delivery
- Implemented a positive and collaborative engineering culture by hiring "bar-raisers", training and coaching existing engineers, and improving cross-functional communication, including launching a biweekly product-vertical newsletter
- Worked closely with product managers, designers, QA, support, and other cross-functional teams to establish a clear vision and roadmap for each engineering team
- Implemented a change management strategy that replaced manual, monthly releases with continuous deployment, resulting in fewer production escalations and increased engineering velocity
- Developed project and resource plans to support development timelines and established team and individual goals and metrics, assessed performance, and executed compensation adjustments as necessary

Engineering Manager

May 2021 – Mar 2022

MSI Data

- Successfully led and coached a full-stack software engineering and operations team of 7 individual contributors to deliver and support robust, scalable, and high-quality software solutions in a cloud-hosted environment
- Conducted resource planning and aligned team member assignments with engineering initiatives
- Recruited, interviewed, and hired engineers at all levels for all engineering teams
- Managed all vendor relationships, including evaluation, negotiation, renewals, and budgeting
- Instituted a company-wide "virtual data room" as the system of record for all department and team KPIs, which was used by the executive leadership team, board of directors, and investors to assess company health
- Identified single points of failure in people, processes, and code, and established change management plans to mitigate associated risks

Senior Software Engineer

Jan 2020 – Apr 2021

MSI Data

- Conceptualized and led the development of a customer onboarding portal, which reduced average go-live time by more than 196 days
- Designed a role-based authorization system to enforce the principle of least privilege
- Accelerated engineering teams' progress on critical deliverables as a rotational staff engineer through technical, product, and project management guidance

Software Engineer

May 2014 – Dec 2019

MSI Data

- Designed and launched a new SaaS product, a white-labeled integration with Looker (Google Cloud), which generated \$1MM in annual recurring revenue
- Pioneered a log ingestion system using SumoLogic and developed real-time dashboards to proactively alert engineering teams to production degradations, enabling a service level objective of 99.99% uptime
- Engineered a scalable web socket microservice using SignalR and Redis to provide push notification capabilities to web clients, reducing total API load by 21% by eliminating the need for frequent data pulls
- Spearheaded a web UI testing framework using Selenium WebDriver and NUnit to automate testing in Chrome, Firefox, IE, and Edge, generating cost savings of over \$200,000 annually

EDUCATION

Master of Business Administration

Marquette University

Bachelor of Science, Software Engineering

Milwaukee School of Engineering
